Background to Clean Care is Safer Care

In previous years, WHO Global Patient Safety Challenges were born from calls from around the world on specific patient safety issues, and were also reflected in global campaigns, which have brought together expertise and evidence to raise awareness, and to catalyze political and professional commitment on these important topics. They have also generated knowledge, recommendations and actions to improve the safety of patients receiving care globally.

The focus and objectives of Clean Care is Safer Care

The first of these Challenges, Clean Care is Safer Care, which was launched in 2005, targeted the important aspect of reducing health care-associated infections (HCAIs). HCAI is the most frequent harmful event in health-care delivery and occurs

<p>Re-energising the world!</p> <p>2005-2015 Clean Care is Safer Care</p> <p>For 10 years member states and autonomous regions around the world have pledged their commitment to clean care. Now some of them are reminding the world just how important it still is to work towards clean hands at the point of patient care every day.</p> <p>Here are some examples:</p> <p>Professor Chris Baggoley AO, Chief Medical Officer, Department of Health, Australia:</p> <p>"Australia is totally committed to good hand hygiene as a simple but crucial intervention to keep our patients safe. Over the last five years, Australia has implemented a successful national campaign based on the WHO strategy, with open public reporting of each hospital's hand hygiene performance. Participation in the Hand Hygiene Australia program is now a mandatory requirement for public and private hospital accreditation in Australia. Embedding and sustaining this important patient safety culture change is a key focus of health care policy."</p> <p>Shona Robison, Cabinet Secretary for Health, Wellbeing and Sport, Scotland, UK:</p> <p>"The Scottish Government fully supports World Hand Hygiene Day on 5th May, to raise awareness around hand-washing best practice."</p>	<p>Mg. Lic. Norma Peralta, Directora, Programa Nacional de Epidemiología y Control de Infecciones Hospitalarias de Argentina:</p> <p>"El Programa Nacional de Epidemiología y Control de Infecciones Hospitalarias de Argentina, en el marco de la Campaña Nacional para la Mejora de Higiene de Manos que la Asociación Argentina de Enfermeros en Control de Infecciones lidera en Argentina, apoya la iniciativa y adhiere a la promoción de la higiene de manos como un alto estándar de calidad y seguridad de atención de los pacientes y prevención de enfermedades. Esta medida, simple y eficaz resulta en la disminución de las infecciones y salva cientos de vidas al año."</p> <p>Desde el Argentina, el Programa Nacional de Epidemiología y Control de Infecciones Hospitalarias de Argentina, renueva, al cabo de sus primeros 10 años, su compromiso de continuar trabajando por la seguridad de los pacientes y la calidad de la atención médica.</p> <p>The National Program of Epidemiology and Hospital Acquired Infections in Argentina, as part of the National Campaign for Hand Hygiene Improvement of the Argentina Association of Nurse in Infection Control leads in Argentina, supports the initiative and adheres to promote hand hygiene as a high standard of quality and safety in patient care. This measure is simple and effective in reducing infections and save hundreds of lives a year.</p> <p>From Argentina, the National Program of Epidemiology and Control of Hospital Infections in Argentina, renewed, after its first 10 years, their commitment to</p>
<p>Dr CHAN Hon-yeet, Director of Health, Hong Kong, China:</p> <p>"Promoting hand hygiene in both healthcare settings and in the community has been accorded a top priority in Hong Kong ever since Hong Kong pledged to support the WHO First Global Patient Safety Challenge in 2005. In the past 10 years, Hong Kong has adopted the WHO Hand Hygiene Strategy in implementing hand hygiene programmes in hospitals, clinics and long-term care facilities. Since 2010, the 5th of May has been marked as an important annual event - Hand Hygiene Awareness Day in Hong Kong. In collaboration with healthcare institutions and community organizations, promotional activities are carried out to encourage proper hand hygiene in healthcare workers, patients, visitors and the general public."</p> <p>Patient safety is always our first concern. Hong Kong is fully committed to promoting hand hygiene as one of the most effective yet simple means for infection control."</p> <p>Department of Health, Republic of South Africa (via Twitter)</p> <p>"Hand hygiene exists as an important topic to prevent hospital acquired infection. Join the campaign WHO SAVE LIVES! Clean Your Hands Campaign promotes hand hygiene action at the point of patient care. Infection prevention is at the heart of strengthening health care systems #safeHANDS."</p> <p>Dr Elisabeth Heisbourg, Directeur Adjoint I.E. de Directeur de la Santé, Luxembourg</p>	<p>Thank you!</p> <p>Page 33</p> <p>SAVE LIVES Clean Your Hands</p>

WHO HHSAF Global Survey 2011

World Health Organization

WHO Hand Hygiene Self-Assessment Framework Global Survey Summary Report

From April to December 2011, health-care facilities registered for the WHO SAVE LIVES: Clean Your Hands initiative and those participating in some national hand hygiene campaigns were invited to participate in a global survey based on the completion of the Hand Hygiene Self-Assessment Framework (HHSAF).

The survey objectives were three-fold:

- to assess the level of progress of health-care facilities in terms of hand hygiene infrastructure, promotional activities, performance monitoring and feedback, and institutional commitment, according to a range of indicators relevant to the WHO Multimodal Hand Hygiene Improvement Strategy summarized in a score;
- to identify gaps in hand hygiene infrastructures and activities according to the HHSAF indicators;
- to provide feedback through summary results.

Methods

The HHSAF is a tool providing a systematic situation analysis of hand hygiene structures, resources, promotion, and practices within a health-care facility. It resembles a questionnaire and is structured in five sections, based on the five components of the WHO Multimodal Hand Hygiene Improvement Strategy (namely system change, training and education, evaluation and performance feedback, reminders in the workplace, and institutional safety climate). The tool includes 27 indicators reflecting the key elements of each strategy component. These are assigned values totaling 100 points within each HHSAF section, adding up to a maximum overall score of 500 points. Based on its overall score, a facility is assigned to one of four levels of progress:

1. Inadequate (score of 0-125): hand hygiene practices and hand hygiene promotion are deficient. Significant improvement is required.

- Participation of **2119 health-care settings** from **69 countries**

- Find more at http://www.who.int/gpsc/5may/hsa_framework/en/

WHO launches a new HHSAF Global Survey starting on 1 June 2015

HOW TO PARTICIPATE ?

- All health-care facilities registered for **SAVE LIVES: Clean Your Hands** will be invited by WHO to participate and submit their Framework results online
- Download the Framework at http://www.who.int/gpsc/5may/hsa_framework/en/ and fill out the online form to give WHO your details
- Facilities' identity and results will be kept strictly confidential
- Results will be issued on **13 October 2015**, the 10th anniversary of the **Clean Care is Safer Care** programme

Country campaign fatigue?
A Hand Sanitizing Relay! (see the video: tinyurl.com/HHRelay)

- Try to break a world record – it is simple!
- Do pre and post intervention (relay) compliance monitoring
- Receive a certificate
- Be part of a global report

Arrange a hand sanitizing relay in your organization and even try to break the world record! - between now and beginning of September 2015

We would like you to tell us if you are organising a hand sanitizing relay in support of the WHO 5 May 2015 call to action. We will use your contact information to provide more instructions for you and for Professor Didier Pittet to send you a congratulatory message upon completion of your relay. We will report on the number of hospitals around the world undertaking sanitizing relays but the name of your hospital will be kept confidential. It will take 1 minute for you to complete the requested information!

– Hand hygiene sanitizing relay information form [↗](#)
 – Watch a video on how you can do a relay [↗](#)

The hand sanitizing relay work is being led by the WHO Collaborating Centre (WCC) on Patient Safety (Infection Control and Improving Practices) at University Hospitals Geneva. Find brief instructions on how to do your hand sanitizing relay here - you can do your relay any time from now until September! You will receive more instructions and support if you complete the Hand Sanitizing Relay Information Form. Send any relay enquiries to handhygiene@who.int.

My 5 Moments for Hand Hygiene

Focus on caring for a patient with a Urinary Catheter

KEY ADDITIONAL CONSIDERATIONS FOR A PATIENT WITH A URINARY CATHETER

- Make sure that there is an appropriate indication for the indwelling urinary catheter.
- Use a closed urinary drainage system, and keep it closed.
- Insert the catheter aseptically using sterile gloves.
- Assess the patient at least daily to determine whether the catheter is still necessary.
- Patients with indwelling urinary catheters do not need antibiotics (including for asymptomatic bacteriuria), unless they have a documented infection.

10 Years of Clean Care is Safer Care
Prof Didier Pittet, World Health Organization
Sponsored by the WHO First Global Patient Safety Challenge – Clean Care is Safer Care

My 5 Moments for Hand Hygiene Focus on caring for a patient with a central venous catheter

1 BEFORE TOUCHING A PATIENT

Immediately before any manipulation of the catheter and the associated intravenous medication administration system, such as:

- Aa. Catheter insertion (before capping or sterile gloves, catheter removal (before pulling or taping, non-sterile gloves, dressing change, dressing change, or before properly assembled equipment for these procedures)
- Ab. Accessing (opening) the administration set and infusion system
- Ac. Preparing medications for infusion into the catheter

2 BEFORE ASEPTIC TECHNIQUE

Immediately before any task that could involve body fluid exposure, such as:

- Aa. Inserting or removing the catheter
- Ab. Dressing/occluding the catheter

3 BEFORE BODY FLUID EXPOSURE RISK

Immediately after any task that could involve body fluid exposure, such as:

- Aa. Inserting or removing the catheter
- Ab. Dressing/occluding the catheter

4 AFTER ASEPTIC TECHNIQUE

Immediately after any task that could involve body fluid exposure, such as:

- Aa. Inserting or removing the catheter
- Ab. Dressing/occluding the catheter

5 AFTER BODY FLUID EXPOSURE RISK

Immediately after any task that could involve body fluid exposure, such as:

- Aa. Inserting or removing the catheter
- Ab. Dressing/occluding the catheter

Key additional considerations for central intravenous catheters

1. **Indication:** Ensure that a central intravenous catheter is indicated. Remove the catheter when no longer medically/clinically indicated.
2. **Insertion/occlusion/management:**
 - 2.1. Avoid inserting catheters into the femoral vein.
 - 2.2. Prepare clean site with an antiseptic alcohol-based 2% chlorhexidine gluconate (preferred) before insertion.
 - 2.3. Use full sterile barrier procedure during insertion (cap, goggles/mask, sterile gloves, sterile gown, large sterile drape).
 - 2.4. Replace gown type (change every 2 days and transparent change every 7 days), reduce change whenever sticky sites.
 - 2.5. Change tubing used to administer blood, blood products, chemotherapy, and fat emulsions within 24 hours of infusion start. Consider changing all other tubing every 96 hours.
 - 2.6. Use aseptic procedure (with non-touch techniques) for all catheter manipulations.
 - 2.7. "Touch the hub" with alcohol-based chlorhexidine gluconate for at least 15 seconds.
 - 2.8. Minimize: Record time and date of catheter insertion, removal and dressing change, and condition (visual appearance) of the catheter site site every day.
3. **Replacement:** Replace any dry gauze type dressing every 2 days.
4. **Consider:** Consider catheter change every 96 hours.
5. **Change:** Change tubing used to administer blood, blood products, chemotherapy, and fat emulsions within 24 hours of infusion start. Consider changing all other tubing every 96 hours.
6. **Removal:** Record time and date of catheter insertion, removal and dressing change, and condition (visual appearance) of catheter site every day.

My 5 Moments for Hand Hygiene Focus on caring for a patient with a peripheral venous catheter

1 BEFORE TOUCHING A PATIENT

Immediately before any manipulation of the catheter and the associated intravenous medication administration system, such as:

- Aa. Catheter insertion or removal (before capping or clean, non-sterile gloves, dressing change, dressing change, or before properly assembled equipment for these procedures)
- Ab. Accessing (opening) the administration set and infusion system
- Ac. Preparing medications for infusion into the catheter

2 BEFORE ASEPTIC TECHNIQUE

Immediately before any task that could involve body fluid exposure, such as:

- Aa. Inserting or removing the catheter
- Ab. Dressing/occluding the catheter

3 BEFORE BODY FLUID EXPOSURE RISK

Immediately after any task that could involve body fluid exposure, such as:

- Aa. Inserting or removing the catheter
- Ab. Dressing/occluding the catheter

4 AFTER ASEPTIC TECHNIQUE

Immediately after any task that could involve body fluid exposure, such as:

- Aa. Inserting or removing the catheter
- Ab. Dressing/occluding the catheter

5 AFTER BODY FLUID EXPOSURE RISK

Immediately after any task that could involve body fluid exposure, such as:

- Aa. Inserting or removing the catheter
- Ab. Dressing/occluding the catheter

Key additional considerations for peripheral intravenous catheters

1. **Indication:** Ensure that a peripheral venous catheter is indicated. Remove the catheter when no longer medically/clinically indicated.
2. **Insertion/occlusion/management:**
 - 2.1. Prepare clean site with an antiseptic (2% alcohol, tincture of iodine, or iodophor, or alcohol-based 2% chlorhexidine gluconate) before catheter insertion.
 - 2.2. Wear clean, non-sterile gloves and apply an aseptic procedure (with non-touch techniques) for catheter insertion, removal, and blood sampling.
 - 2.3. Replace any dry gauze type dressing every 2 days.
 - 2.4. Consider: Consider catheter change every 96 hours.
 - 2.5. Change tubing used to administer blood, blood products, chemotherapy, and fat emulsions within 24 hours of infusion start. Consider changing all other tubing every 96 hours.
 - 2.6. **Removal:** Record time and date of catheter insertion, removal and dressing change, and condition (visual appearance) of catheter site every day.
3. **Replacement:** Replace any dry gauze type dressing every 2 days.
4. **Consider:** Consider catheter change every 96 hours.
5. **Change:** Change tubing used to administer blood, blood products, chemotherapy, and fat emulsions within 24 hours of infusion start. Consider changing all other tubing every 96 hours.
6. **Removal:** Record time and date of catheter insertion, removal and dressing change, and condition (visual appearance) of catheter site every day.

Key lessons learned for infection prevention and control (IPC) from the Ebola outbreak

Absence of IPC basic measures and infrastructures both in the community and in healthcare settings led to the unprecedented situation of this outbreak

Ebola Recovery Assessment
Water, sanitation, and hygiene

- Lack of access to water, sanitation, and poor hygiene practices were problems pre-Ebola, exacerbated the outbreak, and will remain problems post-Ebola

Indicator	Guinea	Liberia	Sierra Leone
Water supply coverage	92% (urban areas; very poor reliability)	65% (rural areas; 50% fully functioning year-round)	60%
Access to improved sanitation	18.9%	16.8%	13%

Recommendation 1

- We recommend performing hand hygiene, by using either an alcohol-based handrub or soap and running water applying the correct technique recommended by WHO
- Alcohol-based handrubs should be made available at every point of care (at the entrance and within the isolation rooms/ areas) and are the standard of care
- If alcohol-based handrubs are unavailable, hand hygiene should be performed with soap and running water whenever necessary. When hands are visibly soiled, hand hygiene should be performed with soap and running water
- ***Strong recommendation, high-quality evidence for the effectiveness of alcohol-based handrub or soap and water***

Ebola Lessons Learned: main messages

1. IPC/WASH in healthcare settings is a cornerstone of the Ebola response
2. Patient safety and healthcare workers safety are equally important during EVD care
3. Need for adequate preparedness, i.e. meeting minimum requirements for IPC/WASH both in the community and in healthcare
4. MOH leadership, partners coordination, and consistent reference to and implementation of correct IPC standards are paramount
5. Need for including social mobilization and taking culture into account in IPC messages
6. Need for building upon the current situation of increased attention on IPC to improve basic structures and standards

WHO web page feature

Introduction
For any infection that can be spread through touch, including those carried in bodily fluids, hand hygiene is vital. It is the key action that protects every individual. That is why WHO highlights a number of key messages on hand hygiene in the prevention of Ebola Virus Disease, and how improving hand hygiene action can positively affect whole communities, a whole country, if the right systems and culture can be embedded.

Key documents
Hand hygiene in health care in the context of Filovirus disease outbreak response
WHO guidelines on hand hygiene in health care

Ebola and hand hygiene presentation
WHO Guideline and systematic review on hand hygiene and the use of chlorine in the context of Ebola

May 5 is the World Health Organization's (WHO's) annual [Save Lives: Clean Your Hands Day](#). It's a time for healthcare professionals to reflect on the impact of hand hygiene compliance on care quality and outcomes. This year's theme as designated by the WHO is: Strengthening healthcare systems and delivery – *hand hygiene is your entrance door*.

Embedding hand hygiene promotional activities as a national priority is key for sustainability. Efforts have therefore been made to support countries or areas with large scale activities to promote hand hygiene in health care.

WHO Patient Safety supports an informal network of coordinators/leaders of such activities with the aim of sharing experiences and learning from each other. At this moment there are 48 participants in the network with coordinated activities to promote hand hygiene in health care either as specific activities or as part of infection prevention and control activities or patient safety initiatives.

Soochh Health, now listed by WHO as "Clean Hands Save India"

WORLD HAND HYGIENE DAY- 05 MAY

World Hand Hygiene Day is nearly here! This year's 5 May theme from the World Health Organization (WHO) is: Strengthening healthcare systems and delivery - hand hygiene is your entrance door.

The theme emphasizes the importance of hand hygiene action in demonstrating overall quality of care within health-care facilities (WHO, 2015). This year the WHO is calling for healthcare facilities to "Take this opportunity to show your colleagues, your country and the world what a strong quality indicator of care 'hand hygiene' is" and to "have the opportunity to commemorate all that has happened around the world over these last 10 years".

**UNDERSTANDING CONSUMER PERCEPTIONS OF HAI AND
HAND HYGIENE THROUGH A GLOBAL SURVEY**

Claire Kilpatrick, World Health Organization

Dr. Maryanne McGuckin, McGuckin Meathods International

Objectives

- Report the results of a 2014 Consumer Global Survey on knowledge, perceptions, and information sources for hand hygiene compliance in healthcare settings.
- Outline those variables that influence consumers' willingness and behaviors in asking health workers to perform hand hygiene.
- Describe considerations for connecting with consumers as positive influencers in the promotion of hand hygiene based on the results presented.
